

# Prevent Cancer: Wireless Devices OFF the Body

In 2013, California doctors reported **invasive breast cancer** in women who wore cell phones in their bras. These women developed horrific tumors directly underlying their phones. Cell phone-induced brain and acoustic neuroma tumors had been confirmed a decade earlier by European scientists through epidemiological studies of Swedish cancer victims.

By 2016, the federal government confirmed “clear evidence” in NTP studies that cell phone radiation induces **various types of cancers and benign tumors, plus pre-cancerous lesions**. A percentage of animals used in the studies developed brain and heart cancers, plus malignancies in skin, lung, liver, adrenals, pituitary, prostate and pancreas.

Scientists now report that **microwave radiation used for wireless technologies** meets all Bradford Hill criteria as a **CONFIRMED HUMAN CARCINOGEN**, on par with asbestos, tobacco smoke, Agent Orange and nuclear fallout. According to numerous scientific studies, wireless radiation is also a teratogen, with potential to cause severe DNA/genetic damage.

In 2017, the city of Berkeley, California, won a major decision in a federal appeals court which denied a request by the wireless industry to block Berkeley’s landmark cell phone “right to know” ordinance. This rule requires cell phone retailers in the city to provide consumers with the following warning:

**“To assure safety, the Federal Government requires that cell phones meet radiofrequency (RF) exposure guidelines. If you carry or use your phone in a pants or shirt pocket or tucked into a bra when the phone is ON and connected to a wireless network, you may exceed the federal guidelines for exposure to RF radiation. Refer to the instructions in your phone or user manual for information about how to use your phone safely.”**

## So This is Bad News:

The International Agency for Research on Cancer (IARC) confirms that wireless radiation **infiltrates internal organs** of the body as potentially cancer-causing electromagnetic currents. Like tobacco and asbestos exposure, wireless radiation takes time to manifest its ultimate biological devastation. Don't wait until it is too late. Get up-to-date news and science:
