

# The Debate Is Over: Microwave Radiation Induces CANCER!

## So Why Is Your Wireless Phone On Your Head?

In May 2016, a \$25 million study overseen by the National Institutes of Health (NIH) reported two types of cancer developed by animals exposed to cell phone radiation: glioma brain tumor and malignant schwannoma of the heart. In addition to the rats that developed these deadly cancers, others developed precancerous hyperplasia cells which become malignant over time. The French government reported in 2017 that nine out of ten popular brands of cell/smart phones, including Apple, Motorola, Samsung and Nokia are emitting **up to six times the amount of radiation reported by the manufacturers.**

♣ Numerous published medical studies now link cell phone radiation to: breast cancer, eye cancer, thyroid tumors, acoustic neuroma (tumor of the inner ear), parotid gland cancer (mouth tumors), cataracts, profound hearing loss, diabetes and many other chronic illnesses.

♣ Instructions that come with wireless devices generally advise you to keep the devices a distance from your body to avoid overexposure to microwave radiation. Have you read those instructions?

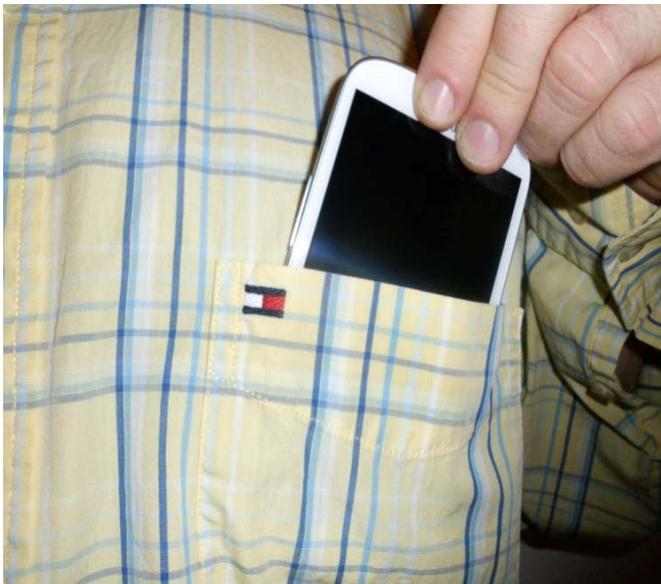

About **700,000** people in the USA are living with a primary brain or central nervous system (CNS) tumor diagnosis, according to the Central Brain Tumor Registry of the United States. In 2018, nearly **79,870** Americans will be newly diagnosed for primary brain/spinal cord tumors. Of these **24,700** will be malignant and **16,700** Americans will die from malignant brain tumors this year.

# Prevent Cancer: Keep Wireless Devices OFF the Body

On April 21, 2017, the city of Berkeley, California, won a major decision in a federal appeals court which denied a request by the wireless industry to block Berkeley's landmark cell phone "right to know" ordinance. This rule has been in effect since March 2016 and requires cell phone retailers in the city to provide consumers with the following warning:

**"To assure safety, the Federal Government requires that cell phones meet radiofrequency (RF) exposure guidelines. If you carry or use your phone in a pants or shirt pocket or tucked into a bra when the phone is ON and connected to a wireless network, you may exceed the federal guidelines for exposure to RF radiation. Refer to the instructions in your phone or user manual for information about how to use your phone safely."**
